

Product Activation

Step 1: Open Microsoft Excel after Installing xl-IQ

xl-IQ will launch each time Microsoft Excel 2002/2003 is launched. However, the first time that this is done after xl-IQ has been installed, xl-IQ will need to be Activated online.

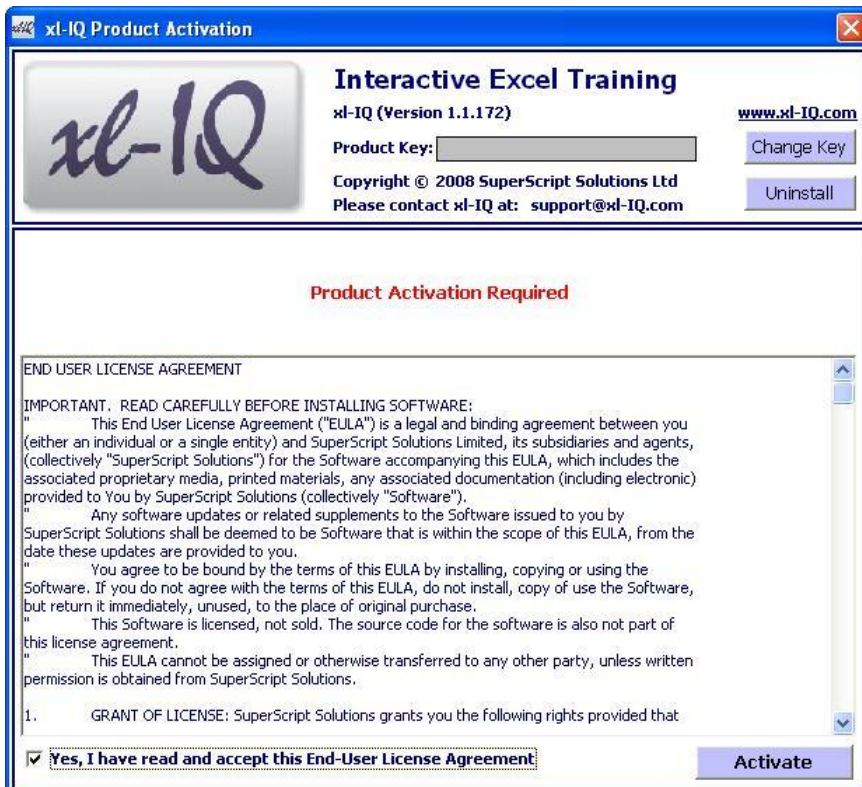

Step 2: Providing a Valid Product Key

In some cases the installation process will automatically have created a Product Key for you, and you will therefore not see this dialog, but will instead see the Product Activation dialog shown within Step 3. If this is the case then please jump ahead to this Step now.

If you do see this Product Validation dialog then you will need to type in the xl-IQ Product Key attached to the License(s) that you have purchased, followed by clicking on the 'Validate' button. Once a valid Product Key has been entered this dialog will disappear and the online Product Activation dialog will be displayed.

Step 3: Online Product Activation

In order to activate xl-IQ, you first need to tick the 'Yes, I have read and accept this End-User License Agreement' checkbox. This will make the 'Activate' button available, which you then need to click.

The Product Key for your License will be displayed within the top section of this dialog (greyed out in picture). This will form the basis of the online Activation, and means that if for some reason this is not the License that you wish to Activate then you need to use the 'Change Key' button in order to provide the desired Product Key to be used.

If your License has expired, or if it was a demo license only, then you can use the www.xl-iq.com link provided in order to purchase a new License, or you can uninstall xl-IQ using the uninstall button.

Step 4: Activation Process

The online activation process will take place without any need for you to provide any further information. No personally identifiable information will be transferred to the xl-IQ web-server.

If a valid xl-IQ license exists for this Product Key, and there is sufficient capacity on this license for another PC to be registered, then you will see the following dialog box appear:

Once you have re-started Microsoft Excel, xl-IQ will then become available within the normal Menu and Toolbar interface.

If instead you receive an error message that you are unable to resolve then please contact xl-IQ at: support@xl-iq.com.
